

## 37-1275: Human NGF / NGFB Recombinant Protein(Discontinued)

**Reactivity :** Human

**Alternative Name :** Beta-NGF Protein, HSN5 Protein, NGFB Protein,

### Description

#### Source : E. coli

Nerve growth factor (NGF) is important for the development and maintenance of the sympathetic and sensory nervous systems. NGF protein was identified as a large complex consisting of three non-covalently linked subunits, alpha, beta, and gamma, among which, the beta subunit, called beta-NGF (beta-NGF), was demonstrated to exhibit the growth stimulating activity of NGF protein. NGFB/beta-NGF gene is a member of the NGF-beta family and encodes a secreted protein which homodimerizes and is incorporated into a larger complex. NGF protein acts via at least two receptors on the surface of cells (TrkA and p75 receptors) to regulate neuronal survival, promote neurite outgrowth, and up-regulate certain neuronal functions such as mediation of pain and inflammation. In addition, previous studies indicated that NGF may also have an important role in the regulation of the immune system.

### Product Info

**Amount :** Human NGF / NGFB Recombinant Protein(Discontinued) / 100 µg

**Purification :** > 85 % as determined by SDS-PAGE.

**Content :** Formulation Lyophilized from sterile 0.01 % TFA, 40 % acetonitrile.

Normally 5 % - 8 % trehalose, mannitol and 0.01% Tween80 are added as protectants before lyophilization.

**Storage condition :** Store it under sterile conditions at -20°C to -80°C. It is recommended that the protein be aliquoted for optimal storage. Avoid repeated freeze-thaw cycles.

**Amino Acid :** Glu19-Ala241
