

## 37-1351: Mouse CD80 / B7-1 Recombinant Protein (Fc Tag)(Discontinued)

**Reactivity :** Mouse

**Alternative Name :** B71 Protein, Mouse; Cd28l Protein, Mouse; Ly-53 Protein, Mouse; Ly53 Protein, Mouse; MIC17 Protein, Mouse; TSA1 Protein, Mouse

### Description

#### Source : HEK293 Cells

The B-lymphocyte activation antigen B7-1 (referred to as B7), also known as CD80, is a member of cell surface immunoglobulin superfamily and is expressed on the surface of antigen-presenting cells including activated B cells, macrophages and dendritic cells. As costimulatory ligands, B7-1 which exists predominantly as dimer and the related protein B7-2, interact with the costimulatory receptors CD28 and cytotoxic T lymphocyte-associated antigen 4 (CTLA-4) expressed on T cells, and thus constitute one of the dominant pathways that regulate T cell activation and tolerance, cytokine production, and the generation of CTL. The B7/CD28/CTLA4 pathway has the ability to both positively and negatively regulate immune responses. CD80 is thus regarded as promising therapeutic targets for autoimmune diseases and various carcinomas. ### Product Info

**Amount :** 1 Recombinant Protein (Fc Tag)(Discontinued) / 200 µg

**Purification :** > 90 % as determined by SDS-PAGE

**Content :** Formulation Lyophilized from sterile PBS, pH 7.4  
Normally 5 % - 8 % trehalose, mannitol and 0.01% Tween80 are added as protectants before lyophilization.

**Storage condition :** Store it under sterile conditions at -20°C to -80°C. It is recommended that the protein be aliquoted for optimal storage. Avoid repeated freeze-thaw cycles.

**Amino Acid :** Met1-Lys245

### Application Note

1. Measured by its binding ability in a functional ELISA. 2. Immobilized human CTLA4 at 10 Åµg/mL (100 ÅµL/well) can bind mouse CD80-Fc, The EC50 of mouse CD80-Fc is 28 ng/mL.

Endotoxin :< 1.0 EU per Åµg of the protein as determined by the LAL method
