36-3697: Anti-CDw17 (Lactosylceramide or LacCer) Monoclonal Antibody(Clone: HuLy-m13)

Clonality: Monoclonal
Clone Name: HuLy-m13
Application: FACS,IF
Reactivity: Human

Alternative Name: Lactosylceramide; LacCer; β-D-galactosyl-(1-4)-β-D-glucosyl-(1-1')-ceramide; CDw17

Isotype: Mouse IgM, kappa

Immunogen Information: β-2 Microglobulin associated proteins from a detergent lysate of human PBL

Description

CD17 is an intermediate glycosphingolipid from the metabolism of higher gangliosides that localizes to sphingolipid-sterol rafts. CD17 is detectable in monocytes, granulocytes, basophils, platelets, a subset of peripheral B cells (CD19+) and tonsil dendritic cells. It is rapidly down regulated on activated granulocytes and is upregulated on IL-2 activated T lymphocytes. CD17 binds to bacteria and may function in phagocytosis. VEGF-treated endothelial cells can produce CD17, which can then mediate signaling toward PECAM-1 expression and angiogenesis. Tumor necrosis factor)-induced astrogliosis (astrocyte proliferation and glial fibrillary acidic protein (GFAP) upregulation) in response to neuro-inflammation (i.e. spinal cord injury) causes an increase in intracellular levels of CD17. Aberrant levels of glycosphingolipids are a feature of cancer cells and may influence integrin clustering and internalization.

Product Info

Amount : $20 \mu g / 100 \mu g$

Content: 200 μg/ml of Ab Purified from Bioreactor Concentrate. Prepared in 10mM PBS with 0.05% BSA &

0.05% azide. Also available WITHOUT BSA & azide at 1.0mg/ml.

Storage condition : Antibody with azide - store at 2 to 8°C. Antibody without azide - store at -20 to -80°C. Antibody

is stable for 24 months. Non-hazardous.

Application Note

Flow Cytometry (1-2ug/million cells); Immunofluorescence (1-2ug/ml);
