

36-3760: Anti-Cytokeratin 8/18 Monoclonal Antibody(Clone: 5D3)

| | |
|--------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Clonality : | Monoclonal |
| Clone Name : | 5D3 |
| Application : | FACS,IF,IHC |
| Reactivity : | Human |
| Gene : | CK8 & CK18 |
| Gene ID : | 3856; 3875 |
| Uniprot ID : | P05787 ; P05783 |
| Alternative Name : | CARD2; CK8; CYK8; CYKER; Cytokeratin Endo A; DreK8; EndoA; K2C8; K8; Keratin 8; Krt 2.8; KRT8; Type-II Keratin Kb8. Cell Proliferation-inducing Gene 46 Protein; CK18; CYK18Cytokeratin Endo B; K18; Keratin-18; Kerd; KRT18 |
| Isotype : | Mouse IgG1, kappa |
| Immunogen Information : | Cytoskeleton preparation from human breast cancer MCF-7 cells |

Description

Cytokeratin 8 (CK8) belongs to the type II (or B or basic) subfamily of high molecular weight cytokeratins and exists in combination with cytokeratin 18 (CK18). This MAb recognizes all simple epithelia including glandular epithelium, for example thyroid, female breast, gastrointestinal tract, respiratory tract, and urogenital tract including transitional epithelium. All adenocarcinomas and most squamous carcinomas are positive but keratinizing squamous carcinomas are usually negative. This antibody is useful in demonstrating the presence of Paget cells; there is very little keratin 18 in the normal epidermis so only Paget cells are stained.

Product Info

| | |
|----------------------------|--------------------------------------------------------------------------------------------------|
| Amount : | 0.1 ml / 0.5 ml |
| Content : | Tissue culture supernatant with 0.05% Azide. Contact us if you require it in a different format. |
| Storage condition : | Antibody with azide - store at 2 to 8°C. Antibody is stable for 24 months. Non-hazardous. |

Application Note

Flow Cytometry (2-5ul/million cells); Immunofluorescence (1:100-1:200); Immunohistochemistry (Formalin-fixed) (1:50-1:100 for 30 minutes at RT) (Staining of formalin-fixed tissues requires heating tissue sections in 10mM Tris with 1mM EDTA, pH 9.0, for 45 min at 95°C followed by cooling at RT for 20 minutes);
