

32-6284: Sars-CoV-2 Spike S1 (200-800 a.a.) His tag C-Term

Description

Source: Escherichia Coli.

A human infecting coronavirus (viral pneumonia) called 2019 novel coronavirus, 2019-nCoV was found in the fish market at the city of Wuhan, Hubei province of China on December 2019.

The 2019-nCoV shares an 87% identity to the 2 bat-derived severe acute respiratory syndrome 2018 SARS-CoV-2 located in Zhoushan of eastern China. 2019-nCoV has an analogous receptor-BD-structure to that of 2018 SARS-CoV, even though there is a.a. diversity so thus the 2019-nCoV might bind to ACE2 receptor protein (angiotensin-converting enzyme 2) in humans.

While bats are possibly the host of 2019-nCoV, researchers suspect that animal from the ocean sold at the seafood market was an intermediate host. RSCU analysis proposes that the 2019-nCoV is a recombinant within the viral spike glycoprotein between the bat coronavirus and an unknown coronavirus.

Product Info

| | |
|----------------------------|---|
| Amount : | 50 µg / 250 µg |
| Purification : | CoV 2019 Spike S1 Protein is >90% pure as determined SDS-PAGE. |
| Content : | CoV 2019 Spike S1 (200-800 aa) Protein 1mg/ml solution is supplied in 1x PBS. |
| Storage condition : | CoV 2019 Spike S1 (200-800 a.a.) Protein is shipped on ice packs. Upon arrival, Store at -20°C. |
| Amino Acid : | The E.Coli derived recombinant protein contains the Coronavirus 2019 Spike S1 (200-800 a.a.) region, fused to 6xHis tag at C-terminal |
