12-4169: Phospho-NDRG1 (Thr346) (Clone: F5) rabbit mAb FITC conjugate

Clonality: Monoclonal Clone Name: NDRG1T346-F5

Application: **FACS**

Reactivity: Human, Mouse

Conjugate: FITC

Format: Conjugated

Differentiation-related gene 1 protein, N-myc downstream-regulated gene 1 protein, Nickel-

Alternative Name: specific induction protein Cap43, Reducing agents and tunicamycin-responsive protein, RTP,

Rit42

Rabbit IgG1k Isotype:

A synthetic phospho-peptide corresponding to residues surrounding Thr346 of human **Immunogen Information:**

phospho NDRG1

Description

N-Myc down-regulated gene 1 (NDRG1) has been reported to be a direct transcriptional target of p53. NDRG1 appears to play a necessary, but not sufficient, role in apoptosis, though its exact mechanism of action remains unknown. NDRG1 expression is elevated in non-small cell lung cancer cells, promoting cancer growth and reducing cytotoxicity to certain anticancer drugs. NDRG1 is also elevated in solid tumors and is recognized as a negative prognostic indicator in breast cancer. Elevated NDRG1 expression is correlated with disease recurrence and metastasis in breast cancer. NDRG1 is phosphorylated by Sgk1, which itself is activated by mTORC2. Phosphorylation of NDRG1 at Thr346 promotes cellular differentiation in adipocytes.

Product Info

10 Tests / 100 Tests Amount:

Content: 1X PBS, 0.09% NaN3, 0.2% BSA

Storage condition: Store at 2-8°C. Avoid repeated freeze and thaw cycles.

Application Note

For flow cytometric staining, the suggested use of this reagent is 5 ̸µL per million cells or 5 Ã∏µL per 100 Ã∏µL of staining volume. It is recommended that the reagent be titrated for optimal performance for each application. See product image legends for additional information.

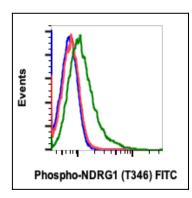

Fig-1: Flow cytometry of THP1 cells unstained and untreated as negative control (blue) or untreated (red) or treated with IFNa plus IL-4 and pervanadate (green) and stained using phospho-NDRG1 (Thr346) (F5) rabbit mAb, NDRG1T346-F5 PE conjugate.
