

32-9097: Recombinant Human Syncoilin/SYNC

Alternative Name : Syncoilin intermediate filament 1; Syncoilin-1; SYNC1

Description

Source : E. coli;

Syncoilin (SYNC) is a muscle-specific intermediate filament protein that belongs to the intermediate filament family. The specific in vivo functions of syncoilin has not yet been determined, but it has been shown to be up-regulated at the sarcolemma in individuals with various forms of neuromuscular disease. Syncoilin is predicted to facilitate lateral force transmission during skeletal muscle contraction, while it does not form homofilaments nor heterofilaments with other IF proteins.

Product Info

Amount : 500 µg / 50 µg

Content : Supplied as a 0.2 µm filtered solution of 10µM sodium phosphate, 30µM NaCl , 10% glycerol, pH 7.2

Amino Acid : Recombinant Human Syncoilin is produced by E.coli. The target gene encoding S168-P458 is expressed.
