Description

Source: Sf9, Baculovirus cells.

Sterile filtered colorless solution.

Interleukin-5 receptor subunit alpha (IL5ra) regulates the development and function of eosinophils. The IL5ra protein is a therapeutic target for hypereosinophilic diseases including allergic inflammations and asthma. Oct2 enhances antibody-secreting cell differentiation via regulation of IL5ra chain expression on activated B cells.

IL5RA produced in Sf9 Baculovirus cells is a single, glycosylated polypeptide chain containing 331 amino acids (21-342a.a.) and having a molecular mass of 37.8kDa. (Molecular size on SDS-PAGE will appear at approximately 40-57kDa). IL5RA is expressed with a 9 amino acid His tag at C-Terminus and purified by proprietary chromatographic techniques.
