Description

Source: Sf9, Baculovirus cells.
Sterile Filtered clear solution.
TNF Ligand Receptor Superfamily Member 25 (TNFRSF25) belongs to the TNF receptor superfamily that binds to the TNF-like protein TL1A. TNFRSF25 interacts directly with the adapter TRADD and regulates lymphocyte homeostasis. TNFRSF25 is also mediates activation of NF-kappa-B and induces apoptosis. TNFRSF25 signals are vital to exert T helper cell 2 effector activity in Th2-polarized CD4 cells and co-stimulate interleukin-13 production by glycosphingolipid-activated NKT cells.
TNFRSF25 Human Recombinant produced in Sf9 Baculovirus cells is a single, glycosylated polypeptide chain containing 417 amino acids (25-199) and having a molecular mass of 46.1kDa (Molecular size on SDS-PAGE will appear at approximately 40-57kDa). TNFRSF25 is fused to a 242 amino acid IgG His-Tag at C-terminus and purified by proprietary chromatographic techniques.
