Alternative Name: Frizzled-4, Fz-4, hFz4, FzE4, CD344, FZD4.

Description

Source: Sf9, Baculovirus cells. Sterile Filtered colorless solution.

chromatographic techniques.Â

Frizzled-4, also known as FZD4 is a 7 Âtransmembrane glycoprotein which belongs to the Frizzled family within the G-protein coupled receptor superfamily. FZD4 acts as a positive regulator of the Wingless type MMTV integration site signaling pathway. These pathways appear to include interactions with G-proteins. FZD4 is implicated in transduction as well as intercellular transmission of polarity information in the course of tissue morphogenesis and differentiated tissues. FZD4 Human Recombinant produced in Sf9 Insect cells is a single, glycosylated polypeptide chain containing 428 amino acids (37-222 a.a.) and having a molecular mass of 48.3kDa (Molecular size on SDS-PAGE will appear at approximately 50-70kDa). FZD4 is expressed with a 239 amino acids hlgG-His tag at C-Terminus and purified by proprietary
