Application: IHC

Reactivity: Human
Gene: PMEL
Gene ID: 6490
Uniprot ID: P40967

Isotype: Mouse IgG2b, kappa

Immunogen Information: Membranes from a human melanoma metastasis

Description

By immunohistochemistry, it specifically recognizes a protein in melanocytes and melanomas. This MAb reacts with junctional and blue nevus cells and variably with fetal and neonatal melanocytes. Intradermal nevi, normal adult melanocytes, and non-melanocytic cells are negative. It does not stain tumor cells of epithelial, lymphoid, glial, or mesenchymal origin. This Mab labels formalin-fixed, paraffin-embedded melanomas and other tumors showing melanocytic differentiation.
