

## 32-13631: H1N1 Puerto Rico Recombinant

### Alternative Name :

H1N1 is a subtype specie of Influenza A virus. H1N1 Influenza Virus has mutated into various strains such as the Spanish Flu strain, mild human flu strains, endemic pig strains, and various strains found in birds. The Influenza A Virus is a globular particle about 100nm in diameter, sheathed in a lipid bilayer derived from the plasma membrane of its host. Studded in the lipid bilayer are two integral membrane proteins some 500 molecules of hemagglutinin ("H") and some 100 molecules of neuraminidase ("N"). Within the lipid bilayer are 3000 molecules of matrix protein and 8 pieces of RNA. Each of the 8 RNA molecules is associated with many copies of a nucleoprotein, several molecules of the three subunits of its RNA polymerase some "non-structural" protein molecules of uncertain function.

### Description

Source: Baculovirus Insect Cells.

Sterile Filtered colorless solution.

Recombinant Full-Length H1N1 Puerto Rico 08/1934 is glycosylated with N-linked sugars, produced using baculovirus vectors in insect cells and its Mw is approximately 62 kDa.

### Product Info

**Amount :** 2 µg / 10 µg

**Purification :** Greater than 90.0% as determined by SDS-PAGE.

**Content :** The Recombinant H1N1 A/Puerto Rico 08/1934 solution contains 10mM Sodium phosphate, pH 7.2, 150mM NaCl and 0.005% Tween-20.

**Storage condition :** H1N1 A/Puerto Rico 08/1934 recombinant should be stored at 4°C. Do not freeze!
