

## 32-17035: Recombinant human BCMA protein with C-terminal mouse Fc tag

**Alternative Name :** TNFRSF17, CD269, BCM, BCMA

### Description

Expression Host : HEK293

The protein has a predicted molecular mass of 32.1 kDa after removal of the signal peptide.

B-cell maturation protein (BCMA or BCM), is also known as Tumor necrosis factor receptor superfamily member 17 (TNFRSF17), which is encoded by the TNFRSF17 gene. TNFRSF17 is a cell surface receptor of the TNF receptor superfamily which recognizes B-cell activating factor (BAFF). This receptor is expressed in immune organs and mature B cell lines. BCMA promotes B-cell survival and plays a role in the regulation of humoral immunity. BCMA can activate NF-kappa-B and JNK.
