

32-17132: Recombinant Human CB1 protein with C-terminal human Fc

Alternative Name : CANN6; CB-R; CB1; CB1A; CB1K5; CB1R; CNR

Description

Expression Host : HEK293

The protein has a predicted molecular mass of 39.3 kDa after removal of the signal peptide. The apparent molecular mass of CB1-hFc is approximately 55-70 kDa due to glycosylation.

This gene encodes one of two cannabinoid receptors. The cannabinoids, principally delta-9-tetrahydrocannabinol and synthetic analogs, are psychoactive ingredients of marijuana. The cannabinoid receptors are members of the guanine-nucleotide-binding protein (G-protein) coupled receptor family, which inhibit adenylate cyclase activity in a dose-dependent, stereoselective and pertussis toxin-sensitive manner. The two receptors have been found to be involved in the cannabinoid-induced CNS effects (including alterations in mood and cognition) experienced by users of marijuana. Multiple transcript variants encoding two different protein isoforms have been described for this gene.

Product Info

| | |
|----------------------------|---|
| Amount : | 50 µg |
| Purification : | The purity of the protein is greater than 95% as determined by SDS-PAGE and Coomassie blue staining. |
| Content : | Lyophilized from sterile PBS, pH 7.4. Normally 5 % - 8 % trehalose is added as protectants before lyophilization. |
| Storage condition : | Store at -80°C for 12 months (Avoid repeated freezing and thawing) |
