

32-13783: MUC1 Human

Description

Source: Human carcinoma cell line.

Physical Appearance: Clear to opalescent colorless frozen solution.

Biological Activity: null

Human Mucin-1 (CA15-3), aka MUC1, is a glycoprotein with extensive O-linked glycosylation of its extracellular domain. This protein has alpha and beta subunits that form a heterodimeric complex. The N-terminal alpha subunit roles in cell-adhesion and the C-terminal beta subunit is involved in cell signaling. Mucins line the apical surface of epithelial cells in the stomach, lungs, intestines, eyes and other tissues. Mucins protect the body from infection by pathogen binding to oligosaccharides in the extracellular domain, preventing the pathogen from reaching the cell surface. Overexpression of CA15-3 is often associated with colon, breast, ovarian, lung and pancreatic cancers.

The Human Mucin-1 (CA15-3) is having a molecular mass of approximately 400kDa, and was purified from human carcinoma cell line.

Product Info

Amount : 25KU / 10KU

Purification : Greater than 60%.

Storage condition : Human MUC1 although stable at 4°C for 1 week, should be stored at -20°C.
