30-2887: Anti-Hu CD32 APC Mab (Clone: 3D3)

Clonality: Monoclonal

 Clone Name :
 3D3

 Application :
 FACS

 Reactivity :
 Human

 Conjugate :
 APC

 Gene :
 FCGR2A

 Gene ID :
 2212

 Uniprot ID :
 P12318

Alternative Name: Fc fragment of IgG receptor IIa, FCG2, FCGR2A, IGFR2

Isotype: Mouse IgG1 kappa

Immunogen Information: purified glycosylated recombinant human FcgammaRIIa2

Description

Specificity: The antibody LT21 reacts with an extracellular epitope of CD21 (CR2), a 145 kDa transmembrane glycoprotein (complement C3d receptor - C3dR) expressed on B lymphocytes, follicular dendritic cells, some epithelial cells and a subsets of T lymphocytes. It is not expressed on immature B cells.

CD21 (complement receptor 2, CR2) binds C3 complement fragments, especially its breakdown fragments, which remain covalently attached to complement activating surfaces or antigen. CD21 has important roles in uptake and retention of immunocomplexes, survival of memory B cells and in development and maintenance of the humoral response to T-dependent antigens. CD21 also serves as a key receptor for Epstein-Barr virus binding and is involved in targeting prions to folicular dendritic cells and expediting neuroinvasion following peripheral exposure to prions. A soluble form of the CD21 (sCD21) is shed from the lymphocyte surface and retains its ability to bind respective ligands.

Product Info

Amount: 100 tests (T100)

Purification:

Purified antibody is conjugated with activated allophycocyanin (APC) under optimum conditions

and unconjugated antibody and free fluorochrome are removed by size-exclusion chromatography.

Content: Stabilizing phosphate buffered saline (PBS), pH 7.4, 15 mM sodium azide **Storage condition:** Store at 2-8°C. Protect from prolonged exposure to light. Do not freeze.

Application Note

Flow cytometry: The reagent is designed for analysis of human blood cells using 10 μ l reagent / 100 μ l of whole blood or 10 6 cells in a suspension. The content of a vial (1 ml) is sufficient for 100 tests.
