

32-18222: Recombinant Human BCAM Protein, His Tag

Uniprot ID : P50895

Alternative Name : AU; CD239; LU; MSK19

Description

Molecular Characterization: BCAM(Glu32-Ala547) 6xHis tag

Molecular weight: The protein has a predicted molecular mass of 57.0 kDa after removal of the signal peptide. The apparent molecular mass of BCAM-His is approximately 55-100 kDa due to glycosylation.

Description: Recombinant human BCAM protein with C-terminal 6xHis tag

This gene encodes Lutheran blood group glycoprotein, a member of the immunoglobulin superfamily and a receptor for the extracellular matrix protein, laminin. The protein contains five extracellular immunoglobulin domains, a single transmembrane domain, and a short C-terminal cytoplasmic tail. This protein may play a role in epithelial cell cancer and in vaso-occlusion of red blood cells in sickle cell disease. Polymorphisms in this gene define some of the antigens in the Lutheran system and also the Auberger system. Inactivating variants of this gene result in the recessive Lutheran null phenotype, Lu(a-b-), of the Lutheran blood group. Two transcript variants encoding different isoforms have been found for this gene.

Product Info

Amount : 100 µg / 50 µg

Content : Lyophilized from sterile PBS, pH 7.4. Normally 5 % - 8% trehalose is added as protectants before lyophilization.

Storage condition : Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not intended for use within a month, aliquot and store at -80°C (Avoid repeated freezing and thawing). Lyophilized proteins are shipped at ambient temperature.
