32-18276: Human S100A9 Protein, hFc Tag

Uniprot ID: P06702

Alternative Name: MIF;NIF;P14;CAGB;CFAG;CGLB;L1AG;LIAG;MRP14;60B8AG;MAC387;S100-A9

Description

Description: Recombinant Human S100A9 Protein with N-terminal human Fc tag

Background : The protein encoded by this gene is a member of the S100 family of proteins containing 2 EF-hand calciumbinding motifs. S100 proteins are localized in the cytoplasm and/or nucleus of a wide range of cells, and involved in the regulation of a number of cellular processes such as cell cycle progression and differentiation. S100 genes include at least 13 members which are located as a cluster on chromosome 1q21. This protein may function in the inhibition of casein kinase and altered expression of this protein is associated with the disease cystic fibrosis. This antimicrobial protein exhibits antifungal and antibacterial activity.

Molecular Characterization: mass of 39.4 kDa after removal of the signal peptide. The apparent molecular mass of hFc-S100A9 is approximately 35-55 kDa due to glycosylation.

Tag: N-Human Fc Tag

Product Info

Amount : $50 \mu g / 100 \mu g$

Purification:

The purity of the protein is greater than 95% as determined by SDS-PAGE and Coomassie blue

staining.

Content: Lyophilized from sterile PBS, pH 7.4. Normally 5 % - 8% trehalose is added as protectants before

lyophilization.

Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not intended for

Storage condition: use within a month, aliquot and store at -80°C (Avoid repeated freezing and thawing). Lyophilized

proteins are shipped at ambient temperature.
