## 32-18295: Human CCL11 Protein, hFc Tag

P51671 **Uniprot ID:** Alternative Name: SCYA11

## **Description**

Description: Recombinant Human CCL11 Protein with C-terminal human Fc tag

Background: This antimicrobial gene is one of several chemokine genes clustered on the q-arm of chromosome 17. Chemokines form a superfamily of secreted proteins involved in immunoregulatory and inflammatory processes. The superfamily is divided into four subfamilies based on the arrangement of the N-terminal cysteine residues of the mature peptide. This chemokine, a member of the CC subfamily, displays chemotactic activity for eosinophils, but not mononuclear cells or neutrophils. This eosinophil-specific chemokine is thought to be involved in eosinophilic inflammatory diseases such as atopic dermatitis, allergic rhinitis, asthma and parasitic infections.

Molecular Characterization: mass of 34.0 kDa after removal of the signal peptide. The apparent molecular mass of CCL11hFc is approximately 35-55 kDa due to glycosylation.

Tag: C-Human Fc Tag

## **Product Info**

Amount:  $50 \mu g / 100 \mu g$ 

The purity of the protein is greater than 95% as determined by SDS-PAGE and Coomassie blue **Purification:** 

staining.

Lyophilized from sterile PBS, pH 7.4. Normally 5 % - 8% trehalose is added as protectants before Content:

lyophilization.

Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not intended for Storage condition:

use within a month, aliquot and store at -80°C (Avoid repeated freezing and thawing). Lyophilized

proteins are shipped at ambient temperature.
