## 32-18332: Human IL25 Protein, hFc Tag

Uniprot ID: Q9H293 Alternative Name: IL17E

## **Description**

**Description**: Recombinant human IL25 Protein with C-terminal human Fc tag

**Background:** The protein encoded by this gene is a cytokine that shares sequence similarity with interleukin 17. This cytokine can induce NF-kappaB activation, and stimulate the production of interleukin 8. Both this cytokine and interleukin 17B are ligands for the cytokine receptor IL17BR. Studies of a similar gene in mice suggest that this cytokine may be a proinflammatory cytokine favoring the Th2-type immune response. Alternative splicing results in multiple transcript variants. **Molecular Characterization:** mass of 42.9 kDa after removal of the signal peptide. The apparent molecular mass of IL25-

hFc is approximately 35-55 kDa due to glycosylation.

Tag: C-Human Fc Tag

## **Product Info**

**Amount:** 50 μg / 100 μg

Purification:

The purity of the protein is greater than 95% as determined by SDS-PAGE and Coomassie blue

staining.

Content: Lyophilized from sterile PBS, pH 7.4. Normally 5 % - 8% trehalose is added as protectants before

lyophilization.

Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not intended

**Storage condition:** for use within a month, aliquot and store at -80°C (Avoid repeated freezing and thawing).

Lyophilized proteins are shipped at ambient temperature.
