

## 32-18403: Human XCR1 Protein, hFc Tag

Uniprot ID : P46094 Alternative Name : GPR5; CCXCR1

## Description

Description : Recombinant human XCR1 Protein with C-terminal human Fc tag

**Background :** The protein encoded by this gene is a chemokine receptor belonging to the G protein-coupled receptor superfamily. The family members are characterized by the presence of 7 transmembrane domains. The encoded protein transduces a signal by increasing the intracellular calcium ion level. The viral macrophage inflammatory protein-II is an antagonist of this receptor and blocks signaling. Some studies have implicated a cluster of genes at 3p21.31, including this gene, as associated with COVID-19 risk. The encoded protein may also play a role in cell proliferation and migration in several types of cancer.

**Molecular Characterization:** mass of 29.7 kDa after removal of the signal peptide. The apparent molecular mass of XCR1hFc is approximately 35-55 kDa due to glycosylation. **Tag :**C-Human Fc tag

## **Product Info**

Amount :	50 μg / 100 μg
Purification :	The purity of the protein is greater than 95% as determined by SDS-PAGE and Coomassie blue staining.
Content :	Lyophilized from sterile PBS, pH 7.4. Normally 5 % - 8% trehalose is added as protectants before lyophilization.
Storage condition :	Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not intended for use within a month, aliquot and store at -80°C (Avoid repeated freezing and thawing). Lyophilized proteins are shipped at ambient temperature.
