

## 32-18479: Cynomolgus MICB Protein, His Tag

**Uniprot ID :** A0A7N9DG75  
**Alternative Name :** MIC-B, PERB11.2

### Description

**Description :** Recombinant Cynomolgus MICB protein with C-terminal 10xHis tag

**Background :** This gene encodes a heavily glycosylated protein which is a ligand for the NKG2D type II receptor. Binding of the ligand activates the cytolytic response of natural killer (NK) cells, CD8 alphabeta T cells, and gammadelta T cells which express the receptor. This protein is stress-induced and is similar to MHC class I molecules; however, it does not associate with beta-2-microglobulin or bind peptides. Alternative splicing results in multiple transcript variants.

**Molecular Characterization:** mass of 33.4 kDa after removal of the signal peptide. The apparent molecular mass of cMICB-His is approximately 35-55 kDa due to glycosylation.

**Tag :** C-10xHis tag

### Product Info

**Amount :** 50 µg / 100 µg

**Purification :** The purity of the protein is greater than 85% as determined by SDS-PAGE and Coomassie blue staining.

**Content :** Lyophilized from sterile PBS, pH 7.4. Normally 5 % - 8% trehalose is added as protectants before lyophilization.

**Storage condition :** Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not intended for use within a month, aliquot and store at -80°C (Avoid repeated freezing and thawing). Lyophilized proteins are shipped at ambient temperature.
