## 32-18481: Cynomolgus EGFR Protein, His Tag

**Uniprot ID:** A0A2K5WK39

Alternative Name: ERBB; ERRP; HER1; mENA; ERBB1; PIG61; NISBD2

## **Description**

**Description**: Recombinant Cynomolgus EGFR protein with C-terminal 10×His tag

**Background :** The protein encoded by this gene is a transmembrane glycoprotein that is a member of the protein kinase superfamily. This protein is a receptor for members of the epidermal growth factor family. EGFR is a cell surface protein that binds to epidermal growth factor, thus inducing receptor dimerization and tyrosine autophosphorylation leading to cell proliferation. Mutations in this gene are associated with lung cancer. EGFR is a component of the cytokine storm which contributes to a severe form of Coronavirus Disease 2019 (COVID-19) resulting from infection with severe acute respiratory syndrome coronavirus-2 (SARS-CoV-2).

**Molecular Characterization:** mass of 70.0 kDa after removal of the signal peptide. The apparent molecular mass of cEGFR-His is approximately 70-130 kDa due to glycosylation.

**Tag :**C-10×His tag

Storage condition:

## **Product Info**

**Amount :**  $50 \mu g / 100 \mu g$ 

**Purification:** The purity of the protein is greater than 85% as determined by SDS-PAGE and Coomassie blue

staining.

**Content :** Lyophilized from sterile PBS, pH 7.4. Normally 5 % - 8% trehalose is added as protectants before

lyophilization.

Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not intended

for use within a month, aliquot and store at -80°C (Avoid repeated freezing and thawing).

Lyophilized proteins are shipped at ambient temperature.
