### Description

Description :Anti-pTHEMIS antibody(4F2), IgG1 Chimeric mAb

This gene encodes a protein that plays a regulatory role in both positive and negative T-cell selection during late thymocyte development. The protein functions through T-cell antigen receptor signaling, and is necessary for proper lineage commitment and maturation of T-cells. Alternative splicing results in multiple transcript variants.

### Application Note

ELISA 1:5000-10000

Figure 1. ELISA examination of DMC101054 specificity. The antibody at various concentrations was incubated in plates coated with either THEMIS or phosphorylated THEMIS (pTHEMIS), and a sigmoidal curve was developed only when using pTHEMIS, but not THEMIS, as capture antigen, indicating a specific binding of DMC101054 to pTHEMIS.
