30-1528PE-Cy7: PE-Cy7 Conjugated Anti-CD79a Monoclonal Antibody (Clone:HM47)

Clonality: Monoclonal
Clone Name: HM47
Application: FACS
Reactivity: Human
Conjugate: PE/CY7
Gene: CD79A
Gene ID: 973

Uniprot ID: P11912
Format: Purified

Alternative Name: CD79A,IGA,MB1 Isotype: Mouse IgG1

Immunogen Information: Synthetic peptide corresponding to C terminal amino acids 208-222 of human CD79a

Description

CD79a (Ig alpha, MB1) forms disulfide-linked heterodimer with CD79b (Ig beta). They both are transmembrane proteins with extended cytoplasmic domains containing immunoreceptor tyrosine activation motives (ITAMs), and together with cell surface immunoglobulin they constitute B-cell antigen-specific receptor (BCR). CD79a and b are the first components of BCR that are expressed developmentally. They appear on pro-B cells in association with the endoplasmic reticulum chaperone calnexin. Subsequently, in pre-B cells, CD79 heterodimer is associated with lambda5-VpreB surrogate immunoglobulin and later with antigen-specific surface immunoglobulins. At the plasma cell stage, CD79a is present as an intracellular component. CD79a/b complex interacts with Src-family tyrosine kinase Lyn, which phosphorylates its cytoplasmic ITAM motives to form docking sites for downstream signaling.

Product Info

Amount: 100 Tests

Purified antibody is conjugated with activated tandem dye of R-phycoerythrin-cyanine 7 (PE-

Purification: Cy[™]7) under optimum conditions and unconjugated antibody and free fluorochrome are

removed by size-exclusion chromatography.

Content: Stabilizing phosphate buffered saline (PBS), pH 7.4, 15 mM sodium azide

Storage condition : Store at 2-8°C protected from light. Do not freeze.

Application Note

Flow cytometry: The reagent is designed for analysis of human blood cells using 4 μ l reagent / 100 μ l of whole blood or 106 cells in a suspension. The content of a vial (0.4 ml) is sufficient for 100 tests. Intracellular staining.
