

32-1814: TSLPR Recombinant Protein

Alternative Name : CRL2,CRLF2Y,Cytokine receptor-like factor 2,Cytokine receptor-like 2,IL-XR,ILXR.

Description

Source : Escherichia Coli. TSLPR Human Recombinant produced in E.Coli is a single, non-glycosylated polypeptide chain containing 232 amino acids (23-231 a.a.) and having a molecular mass of 26.6kDa.TSLPR is fused to a 23 amino acid His-tag at N-terminus & purified by proprietary chromatographic techniques. Thymic Stromal Lymphopoietin Receptor (TSLPR) is a member of the type I cytokine receptor family. TSLPR alongside the interleukin 7 receptor (IL7R) activate STAT3, STAT5, and JAK2 pathways, which is regulated processes such as cell proliferation and development of the hematopoietic system. Two transcript variants encoding dissimilar isoforms have been found for this gene. TSLPR is expressed in heart, skeletal muscle, kidney and adult and fetal liver.
